

Cloud Computing Oral Answers

1. What is Cloud Computing with example?

Cloud computing is the delivery of computing services like servers, storage, and software over the internet. Example: Google Drive.

2. Who is the father of cloud computing?

J.C.R. Licklider is known as the father of cloud computing.

3. List down the basic characteristics of cloud computing.

- On-demand self-service
- Broad network access
- Resource pooling
- Rapid elasticity
- Measured service

4. What do you mean by Vertical and Horizontal scaling in Cloud Computing?

Vertical scaling means increasing power of existing server.

Horizontal scaling means adding more servers.

5. What are the services provided by Cloud Computing?

- IaaS
- PaaS
- SaaS

6. What are different models in Deployment in Cloud Computing?

- Public Cloud
- Private Cloud
- Hybrid Cloud
- Community Cloud

7. Mention the platform which are used for Large Scale Cloud Computing.

- AWS
- Microsoft Azure
- Google Cloud Platform

8. Mention the name of some large cloud providers and databases.

Providers:

- AWS
- Azure
- Google Cloud

Databases:

- MySQL
- Oracle
- MongoDB

9. Explain the difference between cloud and traditional datacenters.

Cloud is internet-based, scalable, and pay-as-you-use.

Traditional datacenter needs physical infrastructure and high setup cost.

10. What are the different components required in cloud computing?

- Client infrastructure

- Application
- Service
- Storage
- Infrastructure
- Security

11. What are the different platforms of cloud architecture?

- Front-end
- Back-end
- Network
- Cloud delivery

12. What is a cloud service?

A cloud service is a service provided through the internet. Example: Gmail.

13. List down the basic clouds in cloud computing.

- Public Cloud
- Private Cloud
- Hybrid Cloud
- Community Cloud

14. What are some issues with Cloud Computing?

- Security
- Privacy
- Downtime
- Internet dependency
- Vendor lock-in

15. Mention the services that are provided by Windows Azure Operating System.

- Compute service
- Storage service
- Database service
- Networking service

16. What is Cloud Computing Architecture?

Cloud computing architecture is the structure of components like servers, storage, and networking used in cloud computing.

17. What are the Services provided by AWS?

- EC2
- S3
- RDS
- Lambda
- VPC

18. What are the Services provided by Microsoft?

- Azure Virtual Machines
- Azure Storage
- Azure SQL Database

19. What is Virtualization?

Virtualization is creating virtual versions of servers or operating systems using software.

20. What is an EC2 instance?

EC2 instance is a virtual server in AWS.

21. What is AMI in EC2?

AMI stands for Amazon Machine Image. It is a template used to launch EC2 instances.

22. How to launch an on-demand EC2 instance in AWS?

- Login to AWS
- Open EC2 Dashboard
- Click Launch Instance
- Choose AMI
- Select instance type
- Configure settings
- Launch instance

23. What is Google App Engine?

Google App Engine is a platform used to develop and host web applications.

24. What are advantages of Google App Engine?

- Automatic scaling
- Easy deployment
- High availability
- Security

25. What are the steps to install and configure Google App Engine?

- Install SDK
- Create Google account
- Configure project
- Deploy application

26. What is Apex?

Apex is an object-oriented programming language developed by Salesforce.

27. What are the Features of Apex as language?

- Object-oriented
- Strongly typed
- Database integration
- Supports triggers

28. What are the application of Apex?

- Business logic
- Database operations
- Automation
- Custom controllers

29. List some Apex Code Development Tools.

- Salesforce Developer Console
- VS Code
- Force.com IDE

30. What are the steps to create application using Apex Programming Language?

- Login to Salesforce
- Create Apex class
- Write code
- Test and deploy

31. What is Salesforce.com Inc.?

Salesforce.com Inc. is a cloud-based CRM company.

32. What is Lightning Platform?

Lightning Platform is Salesforce's platform for building cloud applications.

33. How to create Custom Application using Salesforce Classic?

- Open Setup
- Create App
- Add details and tabs
- Save application

34. What is the difference between custom application and console application in sales force?

Custom app is general-purpose.

Console app provides multi-tab interface for support work.

35. What are the steps to create custom application using salesforce?

- Login to Salesforce
- Open Setup
- Click App Manager
- Create New App
- Configure settings
- Save

36. What is hypervisor in Cloud Computing?

Hypervisor is software used to create and manage virtual machines.

37. Explain Load Balancing in Cloud Computing.

Load balancing distributes workload among multiple servers to improve performance.

38. List the open-source cloud computing platform databases.

- OpenStack
- CloudStack
- Eucalyptus
- OpenNebula

39. What are recent trends of Cloud Computing?

- Edge Computing
- Serverless Computing
- AI integration
- Hybrid cloud

40. Applications of Cloud Computing.

- Online storage
- Web hosting
- Online gaming
- E-learning
- Banking
- Healthcare
